NILFISK (Euroclean) GD 930 HEPA VACUUM

Product Description

The ever-popular GD 930 is a canister vacuum cleaner designed for solid performance in abusive environments. Its tremendous suction power and durable construction make it a reliable choice for demanding applications, such as mold or asbestos remediation. A superior filtration system, including a standard HEPA filter, ensures a safer work environment.

Included Accessories

HEPA-Filtered Vacuum with 1000 Watt Motor Includes: 6' Hose Assembly with Bent Wand, Telescopic Wand, 12" Combination Floor Nozzle, Crevice Tool, Combination Round Dust Brush/Upholstery Tool, and one paper bag

Feature & Benefits:

- A multi-stage filtration system features a paper bag, foam filter and an upstream HEPA filter, helping to ensure indoor air quality. The HEPA filter is capable of filtering 99.97% of particles, down to and including 0.3 microns.

- Quiet operation

- Large wheels, caster, low profile and convenient carrying handle make exceptionally easy to use.
- Sturdy steel container
- Quick and simple access to internal parts for easy servicing.

Voltage @ 60 Hz 115
Amps 8.7
Watts 1000
Waterlift, max. 92"
CFM 74
Paper bag capacity 4 gallons

HEPA area 1890 sq in
Filter area 1232 sq in
Cord Length 50'
Sound level @ 6'6" 53 dB(A)
Dimensions 17.5" x 15" x 13"
Weight 16.5 lbs.

Become EPA Compliant with the Nilfisk GD 930 HEPA Vacuum Cleaner

February 22, 2010

The Nilfisk GD 930 HEPA vacuum eliminates dangerous lead dust during abatement.

Malvern, PA, February 23, 2010—On April 22nd, the EPA's Lead RRP will go into effect. The new rule requires contractors performing renovation, repair and painting projects that disturb lead-based paint in homes, child care facilities, and schools built before 1978 to be certified and follow specific work practices to prevent lead contamination.. Among these work practices are the use of a **HEPA-filtered industrial vacuum cleaner** to minimize dust and thoroughly clean the work area. Because dust is the most common way lead enters the body, a quality HEPA-filtered vacuum cleaner, like **Nilfisk's GD 930** will guarantee that harmful lead dust is quickly captured and safely contained.

The **Nilfisk GD 930** is a durable steel-canister **industrial vacuum** built for solid performance in abusive environments. Equipped with a multi-stage filtration system; a paper bag, foam filter, and upstream HEPA filter ensure that 99.97% of particles, down to and including 0.3 microns are captured and NOT released back into the environment. Designed with large wheels and a carrying handle, the GD 930 is extremely portable.

The vacuum is also very quiet and can be equipped with an electric power nozzle to insure that embedded paint chips and fine dust are completely removed from the work area.

Nilfisk CFM, the **industrial vacuum** division of Nilfisk-Advance America, helps its industrial customers meet their individual cleaning requirements and challenges with an extensive range of high-performance vacuum cleaners. From its Malvern, Pa. headquarters, Nilfisk CFM provides industrial vacuums for heavy-duty applications that require maximum suction power; and specialty vacuums for clean applications that demand "absolute" air purity and facility cleanliness. The company's vacuums are equipped with industry-specific features and exceptionally efficient filtration systems, ensuring dust- and debris-free facilities in the food, chemical/pharmaceutical, electronics, metalworking/powder coating, and a variety of manufacturing industries.
